

# Medical College and Hospital-

### 2.5 Evaluation Process and Reforms

2.5.3 Reforms in examination procedures and processes including automation of the examination system

# **Workplace Based Assessment**

Workplace based assessment complements the traditional classroom learning and ensures that medical professionals are competent in delivering safe and effective patient care in real-world settings. The various workplace-based assessment done in SMVMCH are:

### Direct observation

It involves direct observation of the professional's performance by an assessor/mentor/guide. Postgraduate (PG) student is observed by the guide during their regular work activities, such as patient interactions, clinical procedures, teaching sessions and other tasks.

### Multiple Assessment Tools

These tools include structured mini-clinical evaluations (mini-CEX), case-based discussions, Direct Observation of Procedural Skills (DOPS), peer assessments, patient feedback and self-assessments.

Mini-CEX is a short-structured assessment where the evaluator observes a student encounter with a patient. It assesses the not only the clinical skills but also communication, professionalism and other competencies. Immediate feedback is provided to the students and the individual's performance is rated. DOPS assessment is structured, with clear criteria and

Dr. KAGNE. R.N
DEAN
SRI MANAKULA VINAYAGAR
MEDICAL COLLEGE & HOSPITAL
KALITHEERTHALKUPPAM,
PUDUCHERRY-605107.

guidelines to assess the procedural skills. Evaluator uses a standardized rating scale to evaluate the students' performance

the students' performance

Peer Assisted Skill Assessment enables the students to evaluate their peer skill

performance and helps to identify the routinely done mistakes and provide opportunities for

correction.

Formative and Summative Assessment

Formative assessment provide feedback and identify areas for improvement to improve skills

continuously. Summative assessments make judgements about a professional's overall

competence and readiness for progression. SMVMCH conducts regular and robust formative and

summative assessments as per the NMC guidelines.

Reflective practice

SMVMCH has incorporated reflective writing process in the curriculum. Faculty and students

are trained for reflective writing. Reflective writing is motivated among students during the field

trips, AETCOM sessions, Early Clinical Exposure sessions and family adoption programs.

Self-assessment and Critical Appraisal

UG students evaluate themselves during the mentor mentee meetings and seek feedback from

their respective mentors. PG students are required to do self-assessment and critical appraisal

that gives an opportunity to reflect on themselves. Self-assessment helps them to identify their

strengths and weakness, their career goals, seek feedback from their mentors and to recognize

their accomplishments.

Logbooks

All UG and PG students are required to document their academic activities in the log books.

These log books ensures that students keep a track of the attained competencies and skills in each

Dr. KAGNE. R.N

DEAN

SRI MANAKULA VINAYAGAR

MEDICAL COLLEGE & HOSPITAL

KALITHEERTHALKUPPAM,

GREEN CHERRY & 05107.

department. The attained skill competencies are certified by the respective department faculty and HODs. The log books also encourage the students for reflecting on the learned experiences, lessons learned and decisions taken.

### 360 Degree Feedback

It is also known as multi-rater feedback, which involves gathering feedback from multiple sources to provide a comprehensive view of an individual's skills, behaviours and performance. The sources include self-assessment, peers, faculties, nurses, department clerks and stakeholders. The feedback is usually collected using questionnaires or surveys, where students are rated to provide their perceptions about the individual's strengths, weakness and areas for improvement. The process is kept anonymous to encourage honest feedback. This type of feedback provides a holistic assessment for the students, which may be missed by the traditional way of assessment. SMVMCH is in the initial phase of developing this assessment plan and future actions involves incorporating the 360-degree feedback plans into the student support system.

Assessment - Postgraduate residents.

## Direct Observation of procedural skills (DOPS)

### Objective:

To assess the competencies, technical and professional skills in a range of basic diagnostic and interventional procedures of the medical post graduate students, and to facilitate developmental feedback.

Competencies/ procedures assessed:

Lumbar puncture
Pleural fluid tapping/ drainage
Central line placement
Ascitic fluid tapping
Bone marrow aspiration and biopsy

### Description:

The designated student will obtain the DOPS form, inform the assessor and be prepared for the assessment. The assessor for the student will grade the student based on the checklist provided as the student performs the procedure. The checklist incorporates

- 1. understanding of indications, relevant anatomy, technique of procedure
- 2. Informed consent
- 3. Demonstrates appropriate preparation- pre-procedure
- 4. Appropriate analgesia or safe sedation
- 5. Technical ability
- 6. Aseptic technique (if appropriate)
- 7. Seeks help where appropriate
- 8. Post procedure management
- 9. Communication skills
- 10. Consideration of patient/professionalism
- 11. Overall ability to perform procedure

The assessor shall observe the student from the stage of consent taking till the end of the procedure and post procedure instructions to the patient. A feedback shall be given at the end to the student by the assessor, which will address the areas of improvement if any.

## Internship:

A phase of training wherein fresh medical graduates are expected to conduct actual practice of medical and health care and acquire skills under supervision so that he/she may become capable of functioning independently.

Objectives of Internship Programme for M.B.B.S students are as mentioned below.

- a. Clinically diagnose common disease conditions encountered in the community.
- Refer complicated cases to a higher level without any delay.
- Manage all type of emergencies medical, surgical, obstetric, neonatal and paediatric patients by rendering first level care.
- d. Use rationally and efficiently essential drugs, infusions, blood or its substitutes.
- e. Use discreetly laboratory services and interpret them correctly.
- Demonstrate skills in monitoring of National Health programmes and schemes.
- g. Provide preventive and promotive health care services to the community.
- Develop leadership qualities to function effectively as the leader of the health termorganized to deliver health and family welfare services.

### Sri Manakula Vinayagar Medical College and Hospital, Pondicherry

### Consensus guidelines for Postgraduate Seminar

The guideline for preparing seminar has been discussed under three steps – **Step-1:** drafting the seminar handout, **Step-2:** Rules for making PowerPoint presentation and **Step-3:** guidelines for making an oral presentation. Each of these steps are separately discussed below.

Please refer to guidelines of Medical Council of India and Pondicherry University for the frequency of event and content to be covered. These guidelines are developed to guide and the faculty and student in the conduct of the event in their respective departments.

### Step-1: Drafting the seminar handout

The purpose of a seminar handout is that -

- A student who looks at the handout months after the seminar should be able to get the key points about the topic (which means that you have to think of major key points which your seminar is likely to convey)
- 2. Critical issues or those with no consensus or where there is a debate should be mentioned
- 3. Important references should be given

Please follow the guidelines for preparing the handout. Please share your seminar handout with your moderator before developing the PowerPoint Presentation.

- 1. Type your handout in a word file (A4, Font 12, Times New Roman, Justified setting)
- 2. Get your handout approved by your moderator before making PowerPoint Presentation
- Please do not 'cut/copy-paste' (plagiarism) of the content. Try to write it in your own words with acknowledgement to original source
- 4. Towards the end, mention, key points or take home messages
- 5. Provide 5-10 good references
- 6. Avoid copying/using ready- made on-line presentations and projecting it as your own.

Please send your handout to all faculties by emails/Google group at least three days prior to the seminar. Last two days should be used to refine your presentation, if any faculty comment on it.

Dr. KAGNE. R.N

DEAN

SRI MANAKULA VINAYAGAR

ML. AL COLLEGE & HOSPITAL

THEERTHALKUPPAM,

FUDUCHERRY-605107.

1

Maria Maria Maria Maria

### Step-2: Rules for making PowerPoint presentation from draft of seminar

#### Defining the session content:

Before starting the preparation of PowerPoint presentation, the presenter shall refer to seminar draft and decide the specific learning objectives of the presentation. The logical flow of the presentation can be initially formulated under the following headings: title, introduction, aims and objectives, body of the presentation, conclusion and references. It might depend on the way content is presented in review articles and documents.

#### Choosing a lay out

Using the blank presentation mode, the user can choose the desired layout of the slides. Various types of slide layouts available in the PowerPoint software are: Blank, Title slide, Title only, Bulleted list, two column texts, text with table/chart/clipart, Flowcharts.

#### Selection of background and colour:

#### Background:

- Uniformity of the background should be maintained throughout the presentation.
- Use white background and black letters
- Use Logo of SMVMCH on the first slide of PowerPoint
- Minimize the use of animations and effects. However, for procedural explanation, animation can be used

### Choosing the correct Font:

- The "Sans Serif" type of fonts like 'Arial', 'Helvetica', and 'Tahoma' should be used for PowerPoint presentations.
- A maximum of two different font types can be used during the entire presentation, one for the headings and the other for remaining text.
- Fancy and illegible fonts on the slides can be preferably avoided.
- Font size should not be less than 24 point for the main text and 36 for the title. The presentation material should be legible for the whole audience and not only to the first few rows of people.
- When one wants to highlight the key points, change in Font size can be permitted, but this option can be sparingly used.
- Capital letters should be used judiciously. It is not a must that 'Title case' should be in capitals. Titles look better when presented in a mixture of upper and lower case letters.
- "Rule of Six" i.e., Six lines per slide and six words per line should be preferably followed in the PowerPoint presentation.
- Do not clutter the slide. Only one idea or concept per slide is preferred.
- Headers and Footers can be added to insert the date, slide number or additional text.
   Comments can be added to each slide, acting as reminders for the presenter.

Dr. KAGNE. R.N

DEAN

SRI MANAKULA VINAYAGAR

MEDICAL COLLEGE & HOSPITAL

KALITHEERTHALKUPPAM,

PUDUCHERRY-605107.

· Pictures and graphics - Pictures and graphics make the presentations more interesting. However they should be relevant to the topic presented and shall not act as mere decorations. Jpeg and .gif formats which occupy less disc space are preferred while adding the pictures avoid bmp format.

#### Rehearsal of the presentation:

- After the preparation of the PowerPoint slides, it is suggested to print a rough draft of the presentation and to proof-read it.
- It is better to have a back-up plan before presentation. The presentation may be carried to the venue on a pen drive, CD or stored on a lap top. It is safe to keep a printout of all the slides at hand, which can be referred while speaking or it can be provided to audience as a handout if there are major technical difficulties at the venue.

## Step-3: Guidelines for making oral presentation of seminar

### The postgraduate students must be aware of the following aspects while delivering oral presentation for seminar

- Make sure that you are professionally dressed and groomed
- Arrive early to the presentation venue on the day of presentation and survey the conference room for AV aids and seating arrangement
- Project the slides at the venue and check for mal-alignment
- Practice with the audio-visual equipment at the venue site
- Respecting the clock. Moderator may decide the time for the presentation.
- Demonstrate an ability to communicate effectively
- Present one idea at a time and try to explain it

JATHROH & BOULDON JOSEPTAL

Please avoid postponement\rescheduling of the seminar. Also make sure that the each activity is documented in the relevant registers.

#### Consensus guidelines for Post-graduate Journal club

<u>Purpose:</u> The purpose of these guidelines is to provide broad directions to all the Departments in facilitating Journal club activity for Post-graduates

This guideline is expected to guide faculty to help postgraduates to attain the skills in critical appraisal of an academic journal article. It is common practice to ask questions on methodology details of papers during the viva-voce examination. Please refer to guidelines of Medical Council of India and Pondicherry University for the frequency of event and content to be covered.

### Guidelines to be followed before presentation

• The postgraduate shall search the literature to find relevant journal articles and shall discuss the selected articles for presentation at least three weeks prior with the moderator and finalize the article at least 2 weeks prior to the presentation date. A minimum of 5 articles can be chosen by the postgraduate and discussed with the moderator who chooses the article/s to be discussed during the presentation.

# The following points shall be kept in priority while choosing the original article

- The articles shall be chosen from high quality, peer reviewed journals with reputed editors and members of the editorial board.
- The journal shall be having a good impact factor and shall be indexed in a respected research database.
- Review articles/editorials shall be avoided wherever possible.
- The postgraduate shall make the PowerPoint presentation based on the article which should be approved by the moderator at least 2 days prior to the day of presentation.
- Soft copies of the articles shall be mailed to all the faculty members and other
  postgraduates through a Google group\Whatsapp group. However hard copies can
  also be handed over to the faculties as per their preferences.
- Postponement of the scheduled academic activities is strictly prohibited. However on valid reasons, postponement can be permitted by Head of the Department. But this should not overlap with the presentations of other students on prefixed dates.
- The student obtaining the permission for postponement shall make necessary arrangements with the other colleague students by exchanging the date/topic.
- The academic program should occur even if the moderator is on leave/absent. The
  moderator shall hand over the responsibility to their colleague ensuring the prompt
  conduction of the program.
- All the students and the teaching faculties shall attend the academic program and shall sign in the respective registers maintained in the department.

Dr. KAGNE. R.N

5 DEAN

SRI MANAKULA VINAYAGAR

N. ICAL COLLEGE & HOSPITAL

THEERTHALKUPPAM,
FUDUCHERRY-605107

#### Guidelines to be followed during presentation

Before starting the presentation the presenter shall outline the topic of the article- why
the particular article was selected, search strategy followed, a brief outline of the
background knowledge and its relevance to the present context.

The following stepwise approach shall be followed during the critical appraisal of the article.

#### Introduction:

The introduction should state the current knowledge of the topic with reference to the
recent literature and what research question will be intended to be answered by the
present study. The principle goal of the appraisal should be to seek the clear and most
precise form of the objective.

### Material and Methods:

- Is the study design suited to fulfil the objectives of the study?
- · Is it an experimental or observational study?
- Whether approval of the appropriate ethics committee was obtained before the commencement of the study?
- Was the research work preceded by a pilot study?
- Was the place of study and study duration specified in the study?
- Study sample:
  - o Is the study sample, a biological representative from the target population?
  - What is the sampling method followed and is the sample size adequate to have sufficient power?
  - o Are the inclusion and the exclusion criteria defined appropriately?
  - Is there information about data loss (non-respondents, drop outs, missing values)
- If the study is an experiment, were the patients randomly allocated to the different arms of the study and is the process of randomization described?
- Are the experimental group and the control group comparable?
- Are suitable methods of measurement of the target variable described?
- Are the quality of measurements and outcome valid, reproducible, blinded and quality control checked?
- Is the methodology ethically acceptable?

Dr. KAGNE. R.N

DEAN

SRI MANAKULA VINAYAC ?

MEDICAL COLLEGE & L

KALITHEERTHALK

PUDUCHERRY-600-107

#### Results:

- Are the observations stated clearly for the readers to make their own judgement?
- Are the tables, graphs and illustrations used clear without any duplication of the content?
- Whether the statistical parameters and tests appropriately selected and clearly described (p value, confidence intervals)?
- Is the statistical analysis focused on the study objectives and whether any associated findings are described?
- Are the results consequent to the analysis presented in the study?
- Whether the confounding and intervening variables handled appropriately?
- Are the effect sizes and confidence interval described for the principle findings?

#### Discussion:

- Is there appropriate explanation for the findings observed in the study?
- Is statistical significance clearly distinguished from clinical significance?
- Are the consistencies and inconsistencies of the study findings with the existing literature fully explained?
- Whether the conclusions are derived from the study findings? Are they reliable and valid?
- Are the limitations of the study adequately discussed?
- Is it mentioned that how the results of present study will enhance the current knowledge on the topic?
- Did the study mention about the scope of future research in the present topic?

#### **ANTIMICROBIAL SUSCEPTIBILITY TESTING**

**Q**. Aspirated Pus sample of a patient with an abscess over the gluteal region was sent for culture and sensitivity. Gram stain from the sample showed plenty of pus cells and gram positive cocci in clusters. Blood agar showed beta hemolytic colonies. Catalase and coagulase tests were positive. Antibiotic susceptibility test (AST) was performed using Kirby Bauer disk diffusion method. You are provided with the Zone of inhibition of the various antibiotics tested. Report your observations on the following.

Antibiotic	Observed Zone of Inhibition (mm)
Cefoxitin	12
Penicillin	21
Erythromycin	12
Clindamycin	16
Co-trimoxazole	18
Linezolid	23

#### **CLSI Interpretation guidelines table**

Antibiotic	Susceptible	Intermediate	Resistant	
Cefoxitin	≥22	-	≤21	
Penicillin	≥29	-	≤28	
Erythromycin	≥23	14-22	≤13	
Clindamycin	≥21	15-20	≤14	
Co-trimoxazole	≥16	11-15	≤10	
Linezolid	≥21		≤20	

A. Identify the organism (2)

B. Interpret the AST based on the observed zones of inhibition (4)

C. Prescribe the appropriate antibiotic to this patient based on the AST

findings. Justify (4)
