Abstract-261 Active case finding for Tuberculosis and experience of using mobile phone based data collection in rural, Puducherry – A mixed methods study

Reena Mohan¹, Ganapathy kalaiselvan², Vinayagamoorthy Venugopal³, Vivekananda K⁴

¹Department of Community Medicine; ²Department of Community Medicine; ³Department of Community Medicine; ⁴Department of Community Medicine

BMC Infectious Diseases 2020, **20(Suppl 1)**:ISSHID

Background: Active case finding (ACF) is a key strategy to find them out that helps to achieve elimination of TB by 2025. This activity was to determine the yield of TB cases by community based ACF strategy and to explore the experience of using mobile phone-based application (Epicollect) for community data collection

Methods: Community based house-to-house survey was carried out to identify Presumptive TB cases as per the program definition among fourteen villages of Thirubhuvanai, Primary Health Centre by trained postgraduates, medical interns and medical social workers of Department of Community Medicine, Sri Manakula Vinayagar Medical College and Hospital, Puducherry. Mobile based application (Epicollect5) was used for survey. Presumptive TB cases were further followed to confirm the diagnosis of tuberculosis. Free listing and pile sorting was done among interns to explore their experience on Epicollect using Visual Anthropac software

Results: Totally 11,644 individuals were covered. Of them majority (75%) were adults and 8% were elderly. Diabetes and hypertension were the commonest comorbidities (12.6%). Tobacco and alcohol were the major addictions (7.8%). Three positive cases were detected from 77 TB suspects. Free listing identified 14 salient variables depending on the cut-off value of 0.083 (Smith's Saliency Score) and subjected to pile sorting. Cognitive map identified their experiences into three categories namely knowledge on TB screening, uses of Epicollect and paper based questionnaire

Conclusion: Well-planned ACF done in a systematic manner within the available resources, with proper referral system can help to detect missing TB cases

Abstract-267 Fungal Infection in a post renal transplant patient with DIAPORTHE: A case report

Suchitra S¹, Vichitra K¹, Lokeshwari G², Balajee G², Chandrasekaran V², Anupama Jyoti Kindo¹

¹Department of Microbiology, Sri Ramachandra Institute of Higher Education and Research, Chennai, India; ²Department of Clinical Microbiology, Gleneagles Global Health City, Chennai, India

BMC Infectious Diseases 2020, **20(Suppl 1)**:ISSHID

Background: Here we report a case of infection caused by a rare fungus Diaporthe. The members of genus Diaporthe belong to Diaporthaceae family. They are filamentous, paraphyletic [4] fungi saprophyte on plants and trees. Diaporthe phaseolorum was first isolated in India from Bacopa monnieri (Brahmi) but it is the first case to be isolated and reported in India from human infection.

Case: A 47 year old from Assam went through post liver renal transplantation and was on immune suppressants. Four months after the transplant, the patient noticed a progressive swelling in the right leg. Excision biopsy was done from the swelling and sent in formalin for histopathological examination. Gram stain showed many pus cells and no organism. AFB smear and 40% KOH mount was negative. Fungal revealed growth of a filamentous phaeoid fungi. The isolate was amplified for ITS (18s rDNA) region using fungal specific primers. BLAST sequence analysis of 502bp was carried out, compared and identified as Diaporthe phaseolorum.

Patient was started on oral itraconazole 100mg twice daily. Two months later while on treatment he presented with a recurrence of swelling in the same sight. The excised tissue grew the same fungi, itraconazole dose was increased to 200mg twice daily and advised regular follow up. Consent was obtained from the patient for the publication of their data

Conclusion: Rare fungal infections are emerging in immunosuppressed patients. The clinicians should be made aware to suspect fungal infections in this high risk group patients. This will avoid delay in starting antifungal therapy. As a result morbidity and mortality can be reduced.

This certifies that

Result of the European Examination in Adult Respiratory Medicine 2014

Dear Dr. Siva,

Thank you for your participation to the Examination in Adult Respiratory Medicine on September 6th, 2014, in Munich, Germany. On behalf of the European Respiratory Society, we would like to inform you about your result after our evaluation.

The passing score was set in advance by a group of experts based on the difficulty estimation of each question. In order to pass the exam, at least 61.6 % of the maximum score of 86 points had to be reached, that means not less than 53 points.

Your score is 75 points (= 88%). Therefore you have passed the examination.

Please see the addendum "Score distribution" to see where your total score compares to the mean score of the diploma candidates.

The examination had been composed according to a two-dimensional examination blueprint. One dimension contained ten disease related categories, the other dimension seven task related categories. The table in the 1st addendum shows how you performed in each category in comparison to the mean score of the diploma candidates.

Congratulations on your success and kind regards

Tina Schurter, lic. sc. soc.

PIRFENIDONE INDUCED CUTANEOUS VASULITIS

Author(s): [unreadable] et al.
 Institution: [unreadable]

INTRODUCTION

Significant cutaneous adverse effects (CAEs) are associated with the use of pirfenidone. The most common CAE is photosensitivity, which is characterized by a sunburn-like reaction. Other reported CAEs include rash, pruritus, and alopecia. The present study reports a case of cutaneous vasculitis induced by pirfenidone.

CASE REPORT

The patient is a 45-year-old male with a long history of chronic obstructive pulmonary disease (COPD). He was treated with pirfenidone for the past 6 months. He presented with a 2-week history of a non-pruritic, erythematous, and tender rash on his lower extremities. The rash was characterized by palpable purpura and was accompanied by joint pain. The patient had no other symptoms. The rash resolved after discontinuation of pirfenidone.

FIG 1. ERYTHEMATOUS RASH LESIONS

FIG 2. CLINICAL

FIG 3. HISTOLOGY VIEW

DISCUSSION

Pirfenidone is a novel anti-fibrotic agent used in the treatment of idiopathic pulmonary fibrosis. It is known to cause photosensitivity and other cutaneous adverse effects. The mechanism of these effects is not fully understood. It is hypothesized that photosensitivity is caused by the formation of reactive oxygen species in the skin upon exposure to UV light. Other cutaneous adverse effects, such as vasculitis, may be caused by an immune-mediated reaction to the drug.

CONCLUSION

Cutaneous vasculitis is a rare adverse effect of pirfenidone. It should be considered in the differential diagnosis of patients on this drug who present with a new-onset rash.

About the Author:

Dr. S. Yuvarajan, MBBS, is presently pursuing MD (Pulmonary Medicine). He is a Organising Committee Member for SLEEPCON 2011, International Conference in Sleep Disorders. He is a member of Stem Cell and Regenerative Medicine. He is an organiser of National Level Quiz Competition – PULMOQUIZ 2011. His laurels include Gold Medals in MBBS, Best Science Student Award, State Rank Holder.

Important Facts About The book :

- ➔ This book is one of a kind in the market at present which covers every nook and corner in the field of pulmonology with latest updates and recent advances.
- ➔ It is a full fledged MCQs book, useful for all those who have interest in respiratory medicine.
- ➔ The book will be mainly useful for those UG aspiring for PG, PG aspiring for DM and higher specialities, especially pulmonology and also for those appearing for USMLE.
- ➔ The book contains chapterwise facts and MCQs, for easy revision, under various headings like anatomy, physiology, biochemistry, pathology, forensic medicine, related to respiratory medicine, general pulmonology, tuberculosis and also sub titles like infectious diseases, obstructive airway diseases, interstitial lung diseases, chest wall diseases, pleural diseases, pulmonary function tests, radiology of chest and so on.
- ➔ The book presents information in a brief and simple manner, offering interesting facts to motivate and sustain the readers' interest in the subject from basic to advance level.
- ➔ Chapters like Diagnostic aids, Radiological signs, Clinical signs and Recent updates are useful for clinicians & general practitioners.
