Podcast Title:

Series 1: Transforming with the Curriculum

**Episode 1: Competency Based Medical Education -
"Competing to be competent"**

Department: Medical Education Unit

Category: Continuing Medical Education

TRANSCRIPT

Hello Everyone..... This is Dr.K.Soundariya, Coordinator, Medical Education Unit, Sri Manakula Vinayagar Medical College and Hospital. "Competency Based Medical Education" shortly cited as "CBME" became the "Voice of Medical Education" in India since its implementation in the year 2019. As Medical Educators, how can we excel in implementing the challenging curricular change? Here are few tips

- (1) **Master the Core** – Yes! Understand the foundational concepts of CBME!! This is the first and the foremost step
- (2) **Adapt And Adopt** – Embrace the changes in Medical Education! We have to get ourselves adapted to the new role!
This may help us to adopt effective strategies for the successful implementation of the curriculum
- (3) **Teach with flair** – Try to engage students with active learning strategies
- (4) **Customize for all** –We have to taper our strategies to the diverse needs of the learners
- (5) **Reflect and Guide** –Encourage students' reflection as a "guide by the side"
- (6) **Enhance the space, promote self – pace** – CBME puts the responsibilities on the students' shoulders. Hence it is high time we make them self-paced and self-directed learners
- (7) **Assess right in the student's sight** – Promote "Assessment for Learning" with immediate, appropriate feedback
- (8) **Blend with the trend** – We have to make ourselves updated with the curricular changes and it is hightime we embrace the technology in the teaching learning process
- (9) **Collaborate to be competent** – Promote collaborative learning and team work. This is not only for students but also for faculty for effective networking in overcoming the challenges.
- (10) **Reflect, Renew and Thrive** – Periodically we have to reflect on our process, evaluate and make essential changes

We have to remember that CBME is a dynamic and evolving approach to medical education, hence our commitment to self-improvement, willingness to adapt, and dedication to fostering student learning will contribute to our competence and success as a faculty member in a competency-based medical education environment. In this episode, I have highlighted the tips to transform ourselves with the transforming curricula. In the next episode, I will highlight “How to align our Teaching Learning process with the transforming curricula”.

Thank you!
